

Vantage Low-Voltage Output Station

Part No. LVOS-0-10-PWM-1

The Low-Voltage Output Station (LVOS) is used for the control and automation of LED, CFL, and CCFL lighting loads requiring either 0-10 or pulse width modulation (PWM) for dimming control. The dry contact inputs can be used with motion sensors, light sensors, pressure sensors, IR inputs, magnetic switches, and more. As part of the Legrand lighting solution, it provides control of LED loads as well as inputs from dry contacts for lighting and automation.

Features & Benefits

Controls up to eight separate sets of LED, CFL, or CCFL lighting loads

Offers control of either 0-10 or PWM type loads

Allows for the addition of dry contact inputs to the automation network including motion sensors, light sensor, IR input, pressure sensors, magnetic switches, and more

Manual control and LED status for all eight outputs on front

Firmware upgradable in the field

Powered by line voltage

Specifications

General Info

Product Line	Vantage	UPC Number	840624100287
Country Of Origin	China		

Dimensions

Product Length US	12.0 in
-------------------	---------
