

Fill your home with music without lifting a finger!

Experience the dynamic audio of Nuvo's Player Portfolio and the convenience of voice control from Amazon Alexa

Control your home audio experience using just your voice. To start listening, just ask Alexa for what you want to hear and where you want to listen. You can say things like:

"Alexa, play 90s hip hop from Pandora in the kitchen"

"Alexa, play indie rock radio from TuneIn in the master bedroom"

"Alexa, play meditation mix in the bathroom"

You must refer to the room or zone name in your Nuvo app. For example, if you have a zone called "Living Room", try saying "Alexa, play jazz radio from Pandora in the living room."

Controlling audio functions is just as easy as telling Alexa to mute, change volume, skip song, or stop/start playing. Additionally, you can start music from other Nuvo sources using the player app, and then control it with Alexa.

"Alexa, set volume to 55 on the deck"

"Alexa, skip song in the kitchen"

"Alexa, mute music in the living room"
