

IN-WALL TV POWER KIT

HT2202-WH-V1

NEVER LOOK AT
UGLY TV CABLES AGAIN

designed to be better.™

THE FREEDOM TO INSTALL ANY TELEVISION SYSTEM, ANYWHERE

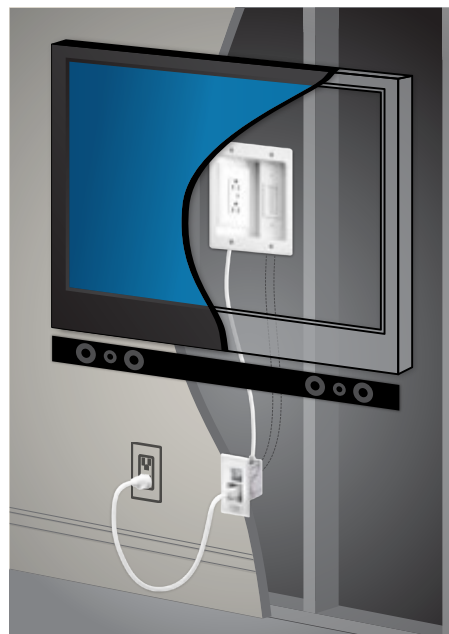

Easily hide all cabling behind the wall with the In-Wall TV Power Kit (HT2202-WH-V1) by Legrand. The kit provides a clean solution for a uniform and expandable in-wall installation.

Extend the electrical power from an existing wall outlet to behind the wall mounted TV without ever having to modify the home's existing electrical wiring. The pre-wired design offers a plug and power solution that is ETL listed for safety. The in-wall design hides all cabling including power, HDMI, coax, and Cat 5e neatly behind the wall. Achieve professional results, without the need to hire an electrician in less than 30 minutes with no hard-wiring required.

The power output module works with most TV plugs including: right angle, straight type and wide over mold plugs. It also provides two power connections for additional devices such as set top boxes, digital TV adapters or sound bars.

The power input module matches the shape and finish of other wall devices for uniformity throughout the home.

The innovative design of the kit provides an ideal solution for difficult to install TV placements, such as corner and outside wall mounting locations.

FEATURES

- Safe and easy to install
