<b>Manufacturer:</b>	Pass & Seymour
<b>File:</b>	Sensor-Wall-Pass_And_Seymour-Occupancy_Switch.rfa
<b>Type Catalog:</b>	Not Applicable
<b>Rendering file:</b>	Not Applicable
<b>Schedule file:</b>	Schedule - Sensor-Wall-Pass_And_Seymour-Occupancy_Switch.rvt

## Instance Properties

<b>Construction</b>	
Annotation Symbol Offset	0.000
<b>Electrical</b>	
Amperage*	20.00 A
Apparent Load*	2500.00 VA
<b>General</b>	
Cover Plate Middle	<input type="checkbox"/>
Cover Plate on Left	<input type="checkbox"/>
Cover Plate on Right	<input type="checkbox"/>
<b>Dimension</b>	
Depth*	1.130
Device Depth Front	0.260
Device Depth Rear	0.500
Height*	4.200
Width*	1.720
<b>Graphics</b>	
Has Snap Locations*	<input type="checkbox"/>
Has Wall Plate	<input checked="" type="checkbox"/>
Label	
<b>Identity Data</b>	
Equipment Number*	
Part Description*	Plugtail Automatic Wall Switch, White
Part Number*	PTWSP250W
<b>Materials</b>	
Cover Material*	Thermoplastic - Pass & Seymour - White

## Type Properties

The family contains 4 types. These are a few of the types:  
Ivory (Values for this type are shown below)

<b>Constraints</b>	
Default Elevation	48.000
<b>Electrical</b>	
Load Classification*	Power
Number of Poles*	2
Power Factor*	1.000000
Voltage*	125.00 V

Identity Data	
Copyright*	Copyright ©2014 Pass & Seymour
Date Created*	September 8, 2014
Date Modified*	September 8, 2014
Description	See Part Description
Equipment Abbreviation*	DR
Family Version*	1.0

Product Material*	Thermoplastic - Pass & Seymour - White

Half-tone text in the property tables indicates that the value is locked from editing.

\*Indicates Shared Parameter and can be scheduled

## Loading and Placing into the Project

One 'Electrical Fixtures' family is supplied and can be loaded into a Revit project through all traditional methods. There are no family supporting files (i.e. type catalog, look up tables or render library files). The sensor places in 3D or plan view and requires a host (i.e. wall).

## Project Behavior

The sensor will by default, be placed with a generic face plate. The face plate can be modified through the instance parameters within the properties window. In order to allow for multiple sensors or receptacles to be placed together, there are parameters built into the family that will modify the face plate to allow for other sensor s or receptacles to place flush with the family.

If incompatible selections are made for the product, an "error box" will appear as well as an error message to aid with trouble shooting. Once the problem has been resolved, the error box and message will disappear and valid information will once again be displayed for the family.

## Instance Parameter

In the "Instance Parameters", the user can control the following options:

- Equipment Number - For tagging each placed instance.
- Annotation Symbol Offset - For inputting the desired offset of the annotation symbol off of the host.
- Has Snap Locations - For toggling the visibility of the snap locations.
- Has Wall Plate - For utilizing the generic face plate.
- Cover Plate on Left - For modifying the face plate as the left most sensor in a group.
- Cover Plate on Right - For modifying the face plate as the right most sensor in a group.
- Cover Plate Middle - For modifying the face plate as a middle sensor in a group.
- Cover Material - For selecting the desired material for the face plate.

## Type Parameter

Each type represents a manufactured product. Therefore, the type parameters should not be modified. Please note:

- Product Documentation Link - Directs a webpage to the products online listing.
- Equipment Abbreviation - For filtering schedules.

Within the type properties dialogue the user will find useful information for scheduling purposes such as Height, Width, Depth and other unique properties of the family. In "Identity Data" the user will find information specific to the model, i.e.: family revision information, Pass & Seymour copyright information, part description, product URL and other specific data. \*See scheduling description below.

## Visibility

For best performance, all model geometry is turned off in Plan view and represented through annotation symbols. Users will see simplified representations of the sensor features in each detail level: coarse, medium and fine.

## Rendering

When the family file is loaded into the project standard Pass & Seymour materials are imported. These may be modified, though ensure that the modification selection matches an actual manufacturer supplied option.

## Schedule Creation

Pass & Seymour products may be scheduled utilizing the schedule view in the given project file. Select and copy (Ctrl-C) the schedule from the sheet view and paste it (Ctrl-V) into a sheet in your project. The schedule filters are set to look for only those units designated with Manufacturer as “Pass & Seymour” and Equipment Abbreviation as “DR”. The schedules contain special functionality for displaying the configured order numbers of the different selected types.
