Legrand Home Smart Lighting
for
Apple HomeKit™

Google Assistant
Voice Control Integration

L1 legrand® | AV
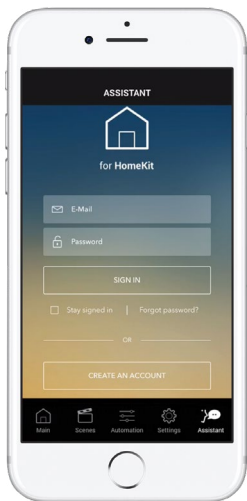

Works with **Apple HomeKit**

WORKS WITH **alexa**

works with the **Google Assistant**

Before proceeding, please make sure you have:

- A connection to a 2.4 GHz Wi-Fi network
- iOS device running iOS 11 or later
- A device with the Google Assistant (i.e. Google Home) connected to the home network
- The Legrand Home app
- Legrand Home Smart Lighting products successfully added to the Legrand Home app
- Google Home app installed on iOS device

---

Connecting the Google Assistant to Legrand Home Products
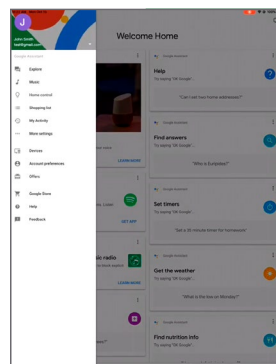

1

Open the Legrand Home App and select Assistant from the bottom bar. Log in with your Legrand Home account (or create an account).
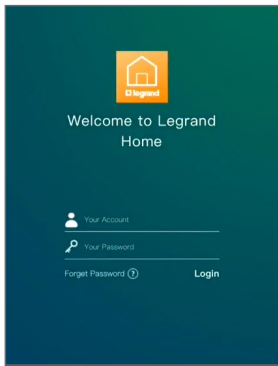

2

Click on the Google Assistant logo.
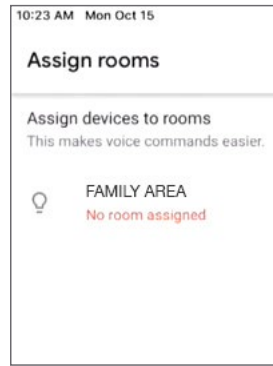

3

The Google Home app will open.

4

In the top left hand corner, click on the triple bars and choose Home Control from the drop down menu.

Click on the plus sign in the bottom right hand corner to add more devices. On the next screen, click on Legrand Home.

5

Log in using the same credentials used in Step 1.

6

After linking your accounts and giving Google access, you will be redirected to an "Assign rooms" screen. Click on a device to assign it to a room.

A room can have multiple devices to allow for easier control of a room. For example, group all your living room devices into the Living Room to issue singular commands that control the whole room.

You can choose to skip this step if you wish.

10:23 AM   Mon Oct 15

Assign rooms

Assign devices to rooms
This makes voice commands easier.

FAMILY AREA
No room assigned

7

You are done! If you add more devices in the future, simply say, "OK Google, sync my devices"
