

radiant[®] Tru-Universal Dimmer

Easy installation, energy efficiency, SKU reduction and more make the Harmony Tru-Universal Dimmer the simple solution to your dimming challenges.

Self-Calibration

Automatically sets the minimum voltage for the specific lamp type installed to ensure reliable dimming.

Easy Installation

Installs just like a conventional Pass & Seymour dimmer, and provides the same reliable performance.

Enhanced Ergonomics & Style

Larger, easy-to-use dimming slider and customer-preferred design make it an attractive addition to any contemporary space. Green LED makes it easy to find in the dark.

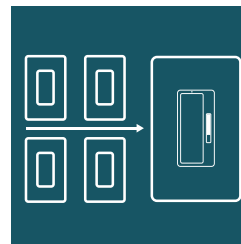

Automatic Lamp Sensing

Instantly identifies lamp type, including incandescent, CFL, halogen, and LED, after its attached to fixture.

Energy Efficient

Gives you the ability to better control lighting levels, which can reduce energy consumption by up to 50%.

Reduce SKUs

Because you only need one dimmer for every type of lamp and load you reduce the number of SKUs you must stock or haul around.
