

CASE STUDY

WATTSTOPPER®

Application Type: Healthcare
Location: New York, NY
Project Scope: Memorial Sloan Kettering –
Josie Robertson
Surgery Center
Designers: SBLD Studio,
HLB Lighting Design

BACKGROUND

Combining human-centered and state-of-the-art design, Memorial Sloan Kettering's Josie Robertson Surgery Center (JRSC) in New York City is a first-of-its-kind outpatient and short-stay cancer surgery facility. The center is designed to provide patients and their families with the safest, most effective and most personalized outpatient surgical care and help to get patients home safely as soon as possible so they can complete their recovery.

LIGHTING OBJECTIVE

The requirement was to make use of natural light as much as possible. Controls needed to be able to integrate with other building systems and pass electrical integrity testing.

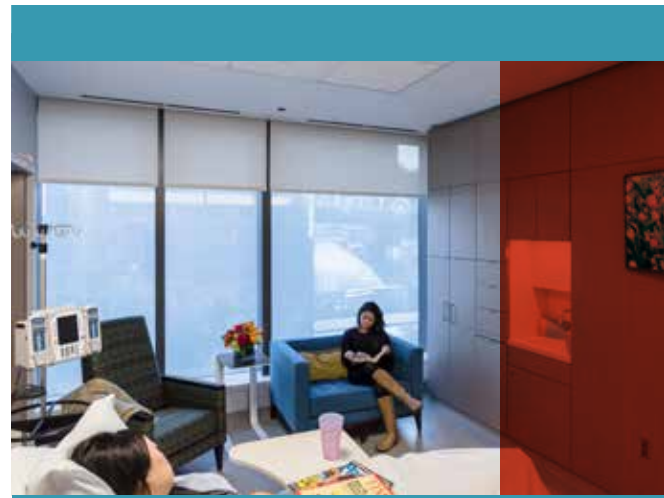

THE SOLUTION

Wattstopper DLM replaced the original lighting controls system that was originally specified and installed for the project. DLM was easily integrated into the hospital's building management system. In addition, Memorial Sloan Kettering found the system easy to install, manage, and maintain. The system also simplifies energy code compliance.

DESIGNER QUOTE

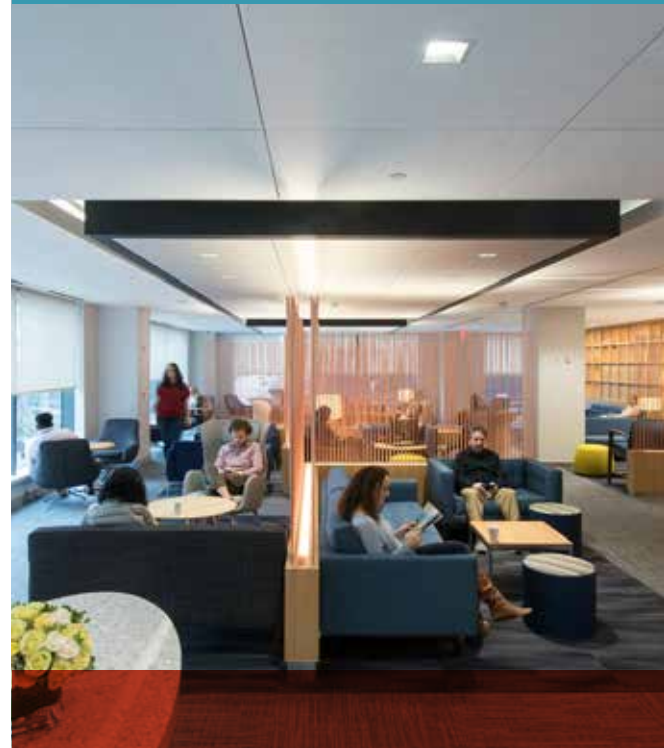

"When conceiving Memorial Sloan Kettering's Josie Robertson Surgery Center we designed a holistic approach to the patient experience, one that incorporates the physical space, technology, and operations. The lighting design and controls at MSK's Josie Robertson Surgery Center are pivotal in helping patients and their caregivers feel comfortable, secure and empowered."

- Suzen Heeley, Executive Director,
MSK Design + Construction
