PRE-ENGRAVED SWITCHES

DESCRIPTION

Engraved wall switches and dimmers improve the appearance and efficiency of lighting controls by clearly displaying the functionality of a multiple button control. Wattstopper DLM Pre-engraved switches and dimmers can be ordered with standard engravings that meet the needs of most applications.

Pre-engraved switches use a direct to substrate printing process for applying text and iconography directly on the wall devices that is durable and long-lasting.

Customers are able to choose among different pre-engraved options when ordering DLM switches and dimmers. (Additionally, Wattstopper offers custom engraving. For information on custom engraving, see the DLM Switch Button Kits and Switch Button Engraving cutsheet.)

- Depending on the wall control ordered, there are 1-4 different options to choose from.
- These pre-engraved switches follow normal nomenclature for existing controls with a suffix of -ENG# (# = 1-4).
- Reference the appropriate SKU on the following pages before placing your order for that exact SKU.

NOTE: Engraving is available for all standard button colors. Indicate the color choice by adding the color code before the ENG suffix in the SKU. For example, LMSW-101-W-ENG1
