

HIGH/LOW LOW VOLTAGE PASSIVE INFRARED FIXTURE INTEGRATED MOTION SENSOR

FS-305-D

PRODUCT OVERVIEW

The FS-305-D is a sensor that dims the lights based on motion. It is a slim, low-profile device designed for installation inside the bottom of a light fixture body.

The FS-305-D consists of a single unit to which the lens module attaches. Four lens choices provide flexibility for varying mounting heights. The lenses mount onto the sensor body from the

exterior of the fixture, threading onto the FS-305 threaded collar.

The device will raise the lights from Low Mode to High Mode in response to motion detection. When the space becomes vacant and after the time delay elapses, the sensor will return lights to Low Mode.

MODELS

FS-305-D

SPECIFICATIONS & FEATURES

Input Voltage: 12-30 VDC

Requires FS-PP power pack for operation

Compact design ideal for use in parking garage and parking lot luminaires

IP65 and UL 244A and 508 rated (when fully assembled, installed and FS-LxW lens is used) for use in wet location environments (indoor and outdoor)

Four interchangeable lenses (FS-L2W, FS-L3W, FS-L6, FS-L7W) for mounting between 8' and 40'

Power consumption: 6.5mA @ 24VDC

Current sinking: 50mA

Adjustable time delay (30 seconds to 30 minutes)

Fixed sensitivity optimized for FS-LxW lens coverages

Adjustable low mode (1V to 5V)

Operating temperature -40°F to +131°F (-40°C - 55°C)

Storage temperature: -40°F to +176°F (-40°C to +80°C)

Operating Humidity: 5% to 95% RH, non condensing

Weight: 1.5 oz (42.52 grams)

Five year warranty

UL and cUL listed

MATERIALS

Polycarbonate, flame retardant
UV resistant
Impact resistant
Recyclable

FACTORY DEFAULTS

Time delay: 12 minutes

Low mode: 1 V

COVERAGE

FS-L2W top and side coverage patterns

FS-L3W top and side coverage patterns

FS-L6 top and side coverage patterns
(indoor, non-wet location use only)

FS-L7W top and side coverage patterns

INSTALLING THE FS-305-D SENSOR IN LIGHT FIXTURE

Choose a level surface for mounting the FS-305-D.

Punch or drill a 1 1/8" hole in the luminaire housing. From the inside of the fixture, insert the sensor threaded collar through the hole in the bottom of the fixture. Hand-tighten the lens securely against the outside of the fixture.

If necessary, use the Tightening Ring as a spacer on either side of the fixture wall. Use FS-C2 cable and connect RJ45 cable to FS-PP. See Installing the Power Pack, below.

Installing the FS-305-D in the light fixture.

INSTALLING THE POWER PACK

1. Determine an appropriate mounting location inside the fixture.
2. Use the holes or mounting slots at both ends of the power pack to secure it to the fixture.
3. Connect wires to the load and the electrical supply as described in the wiring section.
4. Connect the FS-C2 connector to the RJ45 on the power pack.
5. Connect the FS-C2 flying lead on the FS-305-D flying leads as described in the wiring section.

WIRING

The FS-305-D is supplied with flying leads. This facilitates wiring at the factory, and enables manufacturers to use one-piece leads, minimizing splicing in the luminaire housing. Only copper conductors should be used for wiring connections.

There is an initial warm-up period, so during initial power-up, it may take up to a minute before the lights turn on. After warm-up, the sensor will open or close the relay to correspond to the occupancy status of the room. This occurs only during first power up at the initial installation or after a lengthy power failure.
