OMNI Series Floor Boxes provide an excellent activation solution when multiple services are required in open space areas. OMNI Series Floor Boxes offer one-, two-, and three-gang multi-service boxes that are fully adjustable before and after the concrete pour. Available in both stamped steel and cast iron fabrics, they meet a wide range of workstation requirements for today’s and tomorrow’s service needs. These floor boxes have many applications, some of which include schools, financial institutions, and commercial office buildings.

Features & Benefits
- Fully adjustable box. Fully adjustable before and after concrete pour. Reduces installation costs.
- Two Fabrications: Stamped Steel – Lower cost concrete-tight construction option for above grade applications. Cast-Iron – Watertight construction for on or below grade applications.
- Available in two depths. Economical alternatives when pour depths are limited.
- Flush activation assemblies for carpet and tile. Aesthetically pleasing assemblies are interchangeable in both cast-iron and stamped steel box models.
- Available in one-, two-, and three-gang configurations. Removable dividers increase capacity. More configurations to support multi-service applications.
- Triple service boxes. Accommodates power, communication and/or audio/video devices which reduces the need for multiple boxes.
- Brushed aluminum covers for power applications. 830CK Series Aluminum Covers redesigned to accept threaded conduit when passing through power cables.
- Brass and brushed aluminum covers accept single locking power receptacles. New 828DLR Series provides single flip lid cover.
- 828COMTC Series Cover Kit in brass and brushed aluminum. Allows communication devices to be recessed into 880S and 880CS Series Floor Boxes.
- Partition support kit for 3-gang tile flanges. The 838TAL-880 Series Flanges provide partition supports in tile applications for added strength and durability.
- TopGuard protection. All cover assemblies for the OMNI Floor Box Series have TopGuard protection. An integral design which keeps out water, dirt, and debris from the power and communication compartments.
- Boxes and covers have been listed by Underwriters Laboratories Inc. to their standard UL514A, 514C, 514D, and Canadian standard C22.2.
- Datacom connectivity options. Accepts industry standard and proprietary devices from a wide range of manufacturers to provide a seamless and aesthetically pleasing interface for voice, data, audio, and video applications at the point-of-use. A wide selection of data and adapter options available for use with Ortronics® TracJack® and Series II devices.
