

# Wiremold

## REVIT CONTENT GUIDE

**Manufacturer:** Legrand | Wiremold  
**File:** Reducer-Trenchduct-Wiremold-Partial\_End\_Closure.rfa  
**Type Catalog:** Not Applicable  
**Rendering file:** Not Applicable  
**Schedule file:** Schedule - Trenchduct.rvt

### Instance Properties

Dimension	
Availability	Available
Depth	2.500
Depth is 2.5 In.	<input checked="" type="checkbox"/>
Depth is 3.5 In.	<input type="checkbox"/>
Reduced Width	6.000
Start Width Desired	12.000
Width	12.000
Graphics	
Has Duct Alignment Lines	<input checked="" type="checkbox"/>
Has Snap Locations	<input checked="" type="checkbox"/>
Identity Data	
Equipment Number	
Part Description	One 6 In. Right Hand Trenchduct Partial End Closure Reducer, 2.5 In. Depth
Part Number	VA250PEC-RH6

### Type Properties

The family contains the following 3 types:  
Offset Right (Values for this type are shown below)  
Center  
Offset Left

## Loading and Placing into the Project:

One “Electrical Fixtures” family is supplied and can be loaded into a Revit project through all traditional methods. The reducer requires a face to be placed within the project (i.e. duct). Also, ensure that the visibility settings within the project are modified to have the Electrical Fixtures category visible.

## Project Behavior:

Within the type and instance properties dialogues, the user will find useful information for scheduling purposes such as Width, Depth and other unique properties of the model. In “Identity Data” the user will find information specific to Legrand | Wiremold and the model, i.e.: family revision information, Legrand | Wiremold copyright information, part description, product URL and other specific data. \*See scheduling description below.

## Instance Parameters:

In the “Instance Parameters”, the user has the following options to modify;

- Equipment Number - For tagging each placed instance.
- Has Snap Locations - Toggles the visibility of the snap location crosshairs.
- Has Duct Alignment Lines - Toggles the visibility of the lines used to show where the duct will connect.
- Depth is 2.5 In. - Toggles depth between 2.5" and 3.5".
- Start Width Desired - For inputting the start width that needs to be reduced.

## Type Parameters:

Each type represents a manufactured product. Therefore, the type parameters should not be modified by the user for standard configuration. Please note:

- Product Documentation Link - Directs a webpage to the products online listing.
- Equipment Abbreviation - For filtering schedules. \*See scheduling description below.

## Visibility:

For best performance, all model geometry is turned off in Plan View and represented through masking regions and symbolic/model lines that update automatically when a user changes types. For most families the viewing range will have to be lowered since no geometry is visible above the reference level.

## Rendering:

When the family file is loaded into the project, standard Legrand | Wiremold materials are imported. These may be modified, though ensure that the modification selection matches an actual manufacturer supplied option.

## Schedule Creation:

Legrand | Wiremold products may be scheduled utilizing the schedule view in the given project file. Select and copy (Ctrl-C) the schedule from the

sheet view and paste it (Ctrl-V) into a sheet in your project. The schedule filters are set to look for only those units designated with Manufacturer as "Legrand | Wiremold" and Equipment Abbreviation as "VA". The schedules contain special functionality for displaying the configured order numbers of the different selected types.
