

# Wiremold

## REVIT CONTENT GUIDE

**Manufacturer:** Legrand | Wiremold  
**File:** Header\_Duct-Walkercell-Wiremold.rfa  
**Type Catalog:** Not Applicable  
**Rendering file:** Not Applicable  
**Schedule file:** Schedule - Walkercell.rvt

### Instance Properties

Constraints	
Length	60.000
Construction	
Has End Closure	<input type="checkbox"/>
Dimension	
Run Length	60.000
Graphics	
Has Snap Locations	<input checked="" type="checkbox"/>
Identity Data	
Accessory Part Number	Not Applied
Equipment Number	
Part Description	Walkercell Headerduct, 24 In. Wide
Part Number	WCHD2425-60

### Type Properties

The family contains the following 3 types:  
30" Wide (Values for this type are shown below)  
24" Wide  
36" Wide

Dimension	
Depth	2.500
Width	24.000

<b>Identity Data</b>

## Loading and Placing into the Project:

One “Electrical Fixtures” family is supplied and can be loaded into a Revit project through all traditional methods. The Infloor Duct requires a work-plane host to be placed within the project (i.e. floor). The family is line based and is limited to only draw in incremented lengths of 60". Also, ensure that the visibility settings within the project are modified to have the Electrical Fixtures category visible.

## Project Behavior:

Within the type and instance properties dialogues, the user will find useful information for scheduling purposes such as Height, Width, Run Length and other unique properties of the model. In “Identity Data” the user will find information specific to Legrand | Wiremold and the model, i.e.: family revision information, Legrand | Wiremold copyright information, part description, product URL and other specific data. \*See scheduling description below.

The duct and other families share a common offset location, this gives the user the ability to select all models (with the exception of any face based families) within the project and offset the models into the ground.

## Instance Parameters:

In the “Instance Parameters”, the user has the following options to modify:

Equipment Number – For tagging each placed instance.

Has Snap Locations – Toggles the visibility of the snap location crosshairs.

Has End Closure – Turns off end snap locations, and adds End Closure part number to Accessory Part . Number.

## Type Parameters:

Each type represents a manufactured product. Therefore, the type parameters should not be modified by the user for standard configuration. Please note:

Product Documentation Link – Directs a webpage to the products online listing.

Equipment Abbreviation – For filtering schedules. \*See scheduling description below.

## Visibility:

For best performance, all model geometry is turned off in Plan View and represented through masking regions and symbolic/model lines that update automatically when a user changes types. For most families the viewing range will have to be lowered since no geometry is visible above the reference level.

## Rendering:

When the family file is loaded into the project, standard Legrand | Wiremold materials are imported. These may be modified, though ensure that the modification selection matches an actual manufacturer supplied option.

## Schedule Creation:

Legrand | Wiremold products may be scheduled utilizing the schedule view in the given project file. Select and copy (Ctrl-C) the schedule from the sheet view and paste it (Ctrl-V) into a sheet in your project. The schedule filters are set to look for only those units designated with Manufacturer as "Legrand | Wiremold" and Equipment Abbreviation as "WCH". The schedules contain special functionality for displaying the configured order numbers of the different selected types.
