

Wiremold

REVIT CONTENT GUIDE

Manufacturer:	Legrand Wiremold
File:	Tee-Wallduct-Wiremold-Sweep.rfa
Type Catalog:	Not Applicable
Rendering file:	Not Applicable
Schedule file:	Schedule - Wallduct.rvt

Instance Properties

Dimension	
Availability	Available
Depth	6.000
Depth Desired	6.000
Graphics	
Has Snap Locations	<input checked="" type="checkbox"/>
Identity Data	
Equipment Number	
Part Description	Wallduct Sweep Tee, 30 In. Wide, 6 In. Deep
Part Number	WD30W600-SWTS

Type Properties

The family contains 5 types. These are a few of the types:

- 30" Width (Values for this type are shown below)
- 10" Width
- 18" Width
- 24" Width

Dimension	
Height	10.000
Width	30.000
Identity Data

Materials

Product Material	Steel - Wiremold
------------------	------------------

Half tone text in the property tables indicates that the value is locked from editing.

Loading and Placing into the Project:

One “Electrical Fixtures” family is supplied and can be loaded into a Revit project through all traditional methods. The tee requires a face to be placed within the project (i.e. duct). Also, ensure that the visibility settings within the project are modified to have the Electrical Fixtures category visible.

Project Behavior:

Within the type and instance properties dialogues, the user will find useful information for scheduling purposes such as Width, Depth and other unique properties of the model. In “Identity Data” the user will find information specific to Legrand | Wiremold and the model, i.e.: family revision information, Legrand | Wiremold copyright information, part description, product URL and other specific data. *See scheduling description below.

The user has the option to input a depth size, which when the inputted size doesn't match a real product, the closest appropriate size will be used. When an inaccurate value is inputted, an error will be shown in the Availability parameter stating the available depth sizes.

This model should be placed on the end of a Wallduct duct by snapping to the set snap locations. This is meant to meet up with a perpendicular duct.

Instance Parameters:

In the “Instance Parameters”, the user has the following options to modify:

- Equipment Number – For tagging each placed instance.
- Has Snap Locations – Turns off the device plate placement crosshairs.
- Depth Desired – For inputting a desired Depth value.

Type Parameters:

Each type represents a manufactured product. Therefore, the type parameters should not be modified by the user for standard configuration. Please note:

- Product Documentation Link – Directs a webpage to the products online listing.
- Equipment Abbreviation – For filtering schedules. *See scheduling description below.

Visibility:

For best performance, all model geometry is turned off in Plan View and represented through masking regions and symbolic/model lines that update automatically when a user changes types. For most families the viewing range will have to be lowered since no geometry is visible above the reference level.

Rendering:

When the family file is loaded into the project, standard Legrand | Wiremold materials are imported. These may be modified, though ensure that the modification selection matches an actual manufacturer supplied option.

Schedule Creation:

Legrand | Wiremold products may be scheduled utilizing the schedule view in the given project file. Select and copy (Ctrl-C) the schedule from the sheet view and paste it (Ctrl-V) into a sheet in your project. The schedule filters are set to look for only those units designated with Manufacturer as “Legrand | Wiremold” and Equipment Abbreviation as “WD”. The schedules contain special functionality for displaying the configured order numbers of the different selected types.
