WIRING INSTRUCTIONS
Select proper wire size & type for load and application.

CAUTION: CONDUCTORS MUST BE DE-ENERGIZED BEFORE WIRING.

1) Wire preparation:
   a. Strip conductors as shown in Fig. 1.

2) Wiring method:
   a. Insert or wrap (see Fig. 2) all conductors into identified terminal pockets or screws.
   b. Insert all conductors into identified terminal pockets.
      1. Green wire to green wire terminal pocket or green screw.
      2. White wire to white terminal pocket or white screw on 125V & 277V units.
      3. Black wire to brass (gold) terminal pocket or brass screw.

Tighten terminal screws to 14 in. lb.
