## POWER SUPPLY IN-WALL EXTENSION KIT, BLACK

WP9000-BK | [On-Q](#)

---

### FEATURES & BENEFITS

The Power Supply In-Wall Extension Kit allows for code compliant installation of most wall mounted low voltage products that require an external power supply. The kit allows power supplies to connect at receptacle height in the wall with a keystone adapter. Power is then extended to the low voltage device, wherever it's installed, using in-wall rated speaker cable - keeping bulky power supplies out of sight and cables concealed in the wall.

The kit includes a keystone adapter insert, 4 crimp connectors, and a 4" barrel connector cable assembly which can replace power supply ends that are not compatible with the keystone insert. It can be used with devices such as wall mounted touch screens, sound bars, wireless IP cameras, LED lighting, and in-wall amplifiers.

- Code compliant in-wall extension of power to low voltage devices
- Keeps power supplies out of sight and cables concealed in the wall
- Use with power supplies up to 48vDC at 100 watts
- Supports all low voltage power supplies and connection types
- Supports LED accent lighting kits
