

The DIN Contact Input Station is part of Wattstopper’s Architectural Dimming system and provides a single integration point for a large variety of sensor inputs and external switches. Each station features ten contact input channels for monitoring the open and close states from a variety of external devices. These devices include magnetic door contact switches, momentary switches, motion detectors, daylight sensors, and more.

## Features & Benefits

Provides +12VDC 50mA of combined power to all device or power can be provided by another device

LED indicator for each contact channel for channel-by-channel feedback

Connect to the system via WireLink (wired) or RadioLink (wireless)

Integrated switch to trigger each input channel

DIN mounted low-voltage device

Accepts dry contact signal from a variety of sensor types

## Specifications

### General Info

Product Line	Vantage	UPC Number	804428120735
Country Of Origin	China
