

The LMEQ-41 is an LCD capacitive touchscreen for the DLM system that helps customers meet code out of the box without programming, by adhering to Wattstopper’s Plug n’ Go™ (PnG) rules. The professional, predefined interface provides whole room, lighting, scene control, and tunable-white control through Equinox user interface widgets (see page 4). If a project includes Blanco™ tunable white lighting, the LMEQ-41 automatically provides an additional widget that can adjust the lighting’s intensity and color temperature level. Additionally, users and installers alike will appreciate the dynamic labeling that identifies a button and/or scene’s functionality with clear, user-defined text. The LMEQ-41 is ideal for office buildings (particularly open offices and executive suites), conference rooms, college classrooms, and healthcare spaces where layered, dimmable, and Blanco™ tunable white lighting is installed.

Features & Benefits

| | |
|--|---|
| 4.3" LCD panel with capacitive touch interface | Automatic PnG™ functionality means no special programming required out of the box for initial configuration |
| Unique scenes, lighting, room, and HCL user interfaces via easy to use Equinox “widgets” | Dynamically updated feedback based on system status |
| Settings menu allows for personalized control functions | Custom image and pin-enabled lock screen |
| Scene creation and editing capability provides flexible control | Cat 5e Ethernet connectivity and powered over PoE |
| Ambient light sensor for auto day/night screen backlighting | Active proximity sensors for approach and auto sleep modes |
| Black glass-to-edge surface aesthetic, titanium colored frame | |
