The LMSM Segment Manager is a Network Controller designed to communicate with DLM local networks and/or LMCP panels. It provides control, monitoring, adjustment, and standard scheduling functionality for networked DLM systems. The Network Supervisor is a PC server running similar software designed to coordinate control of multiple Segment Managers and store historical data.

Features & Benefits

Provides global control of DLM segment networks and access to advanced features

Supports third party integration with BAS through BACnet/IP

Connects to DLM segment network and PC, LAN or Internet via Ethernet

Enables scheduling, power monitoring and remote adjustment of devices on DLM local networks

Friendly browser-based user interface

Optional server-based network supervisor package records energy-use data to create long-term history

Specifications

General Info

Product Line	Wattstopper	Country Of Origin	United States
