

The core of the wireless, room-to-room network of Nuvo's wireless players, the Gateway connects to a home router and uses the latest Wi-Fi protocol to reliably send music, from your home network or Internet Radio, to multiple players throughout your system. Outside North America? Use -EU, -UK or -AU when ordering.

## Features & Benefits

The Gateway allows all of your players to talk to each other, share audio content, initiate commands, and even play the same content through every zone, all in perfect sync.

Using the state-of-the-art wireless protocol, 802.11n, the Nuvo system can deliver faster more robust signal transmission. That means your music is constantly streaming.

Wireless "n" technology offers the most broad range signal capability, to send music throughout your entire home, and even outside areas.

Just connect to your home router and the system automatically streams audio from the internet to your players, without any fuss or hassle.

Concurrent use of both 2.4 and 5.6 Ghz bands allows the system to avoid interference. That means your music never stops or hiccups.

## Specifications

### General Info

UPC Number 701963853084

Country Of Origin China

Product Line Nuvo

Application Sector Residential

Standard FCC, IC, CE-EMC, C-Tick, cULus, GS Mark, CE-LVD, RoHS

### Technical Information

Number of Fibers Ethernet RJ45 10/100/1000, Wireless: 2 TX x 2 RX MIMO, IEEE 802.11a/b/g/n

Network LAN - Ethernet, Wireless

Power Supply 12

Connector RJ45

Security WPA2/256-bit encryption

Environmental Conditions 10 to 90 (relative humidity, non-condensing) pct
