

The Legrand Shading Systems Spec Series fascia roll roller shade bracket system has options for motor operated shades, manually operated shades, and convertible manual to motorized (MTM) operated shades. The fascia brackets come in three sizes and can support shades up to 15 feet wide by 20 feet tall with up to 6 shade bands per motor. The Spec Series has several fascia options to fit any bracket including front and back fascia. The fascia is easy to install using a simple clip on system. Accessories such as side angles and sill rails are available for room darkening applications and mates with the fascia to maximize darkening. In addition, there are bracket options for dual shades, shades in pockets, and bottom loading shades. There are color coordinated bracket covers provided with each shade that match the bracket and fascia color options and finish the installation. The DLM/QIS shade motors have a unique counter-balance spring design that allows shade to use less energy and for extremely quiet operation. This patented design also allows the shades to be manually pulled into position using the hembar. This feature is unique to the Legrand system.

## Features & Benefits

Fascia bracket system for small to large shades	Installation options for manual, motorized, and coupled shades
Use DLM or QIS motors and control systems	Seamless integration with Wattstopper Lighting Control Systems for seamless daylighting and automaton control. Allows shades to join the BMS system using BacNet over IP
Steel brackets in 5 colors to match windows and decor	Covered by Legrand Shading systems standard 25 year warranty

## Specifications

### General Info

Product Line	Shading Systems
Application Sector	Commercial

### Additional Information

Product Has Potential to Contribute to LEED	Yes
