legrand®

Spacious. Sleek. Easy. Just the way you designed it.

We listened to what you had to say. You told us what you wanted in a raceway. And what you wanted was more. The DS4000® Series Raceway. With exclusive downward activations, our profile is cleaner and smoother. We've added one-third more wiring capacity than traditional profiles. To better integrate the raceway with your environment, we expanded the color palette. And we made it easier to install. Thanks to you. All of you.

If it's not easy, it's not better. That's why the DS4000 Series Raceway includes time-saving features to get you off the job and on to the next. Sooner. A base with an integrated divider allows for

"With a modular design, adjustable couplings and a built-in divider, I can hit the ground running — to the next job."

easy installation. Modular design and Adjust-to-Fit™ couplings mean less cutting. You can bypass large and small obstacles with obstacle avoidance fittings. And it accepts all standard NEMA faceplates and devices. The DS4000 Series Raceway comes prewired as well, saving time and labor. There's one-third more capacity, yet fewer parts. Giving you more with less.

"I get capacity, compatibility and bend radius controls as well as more colors."

With its innovative problem-solving capabilities, the DS4000 Series Raceway can handle the most demanding wiring and cabling applications. Industry-leading 10 Gig Ready fittings meet the requirements for emerging 10G over copper applications as well as fiber to the desktop. Dual covers separate power and cabling. You get one-third more wiring capacity than traditional profiles. But not at the expense of style – thanks to downward facing receptacles. For intelligent engineering, delivered beautifully.

A curved shape. A streamlined profile. A perfect blend of aesthetics and functionality. With the DS4000 Series Raceway, you get a cleaner look because of the downward facing activations. Simplicity of design is carried right on down to overlapping fittings. A fresh palette of colors allows you to blend the raceway with décor. Choose from Designer Ivory, Designer Gray, Metallic Bronze, Anodized Aluminum and Matte Black.

"I want a raceway that offers fresh colors, faceplates with a clean look and a sleek profile."

Downward Facing Connectivity

Large bend radius for data cables and activations streamlines the raceway appearance and provides increased protection for both activations and cabling.

Innovative Profile

Aesthetic design allows for more efficient use of raceway capacity and provides 1/3 more wiring capacity than conventional raceways including the 4000® Series Raceway.

Adjust-to-Fit Couplings

Included couplings provide up to 4" of lateral adjustment, eliminating the need for precision cuts and reducing waste caused by measuring errors.

10 Gig Ready™ Feature

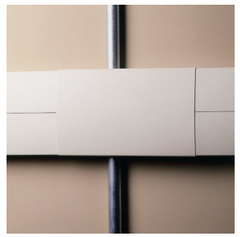
High capacity and unique crossover fittings provide greater space within the raceway to accommodate larger diameter 10G cable.

FiberReady® Bend Radius Controls

All fittings include cable bend radius control and meet the specifications for Fiber Optic and UTP/STP cabling and exceed the TIA 569 requirements for communications pathways.

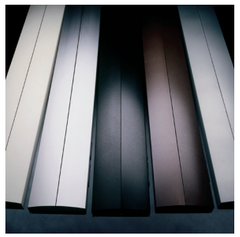
Offset Fittings

Bypass large and small obstacles, as well as small offsets in supporting walls. Seamless installations around small offsets in supporting walls are easy with offset fittings that accommodate depths of up to 9".



Obstacle Avoidance Fittings

Bypass large and small obstacles like conduit and small raceways with a full range of fittings. Small obstacle avoidance fittings can also serve as a transition fitting to other Wiremold metal raceway systems.



Expanded Color Palette and Finishes

Available in an updated palette of colors and finishes including Designer Ivory, Designer Gray, Matte Black, Metallic Bronze and Anodized Aluminum. Custom colors are also available.
