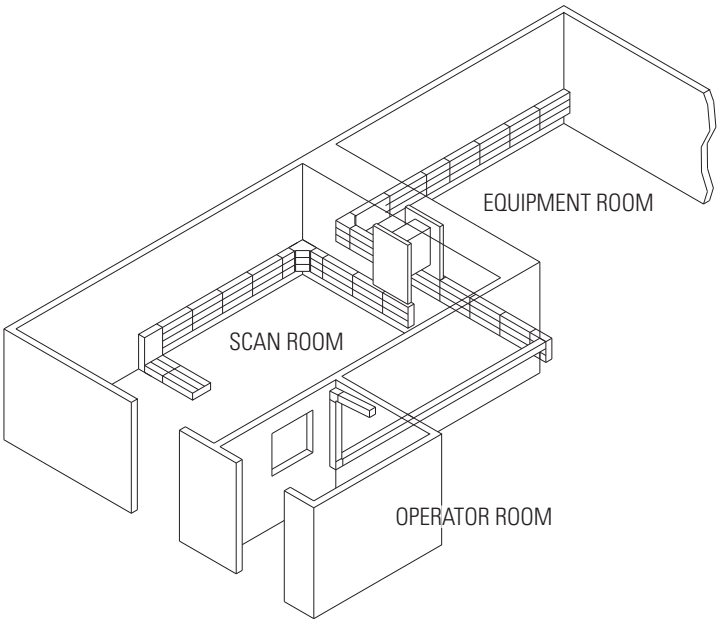
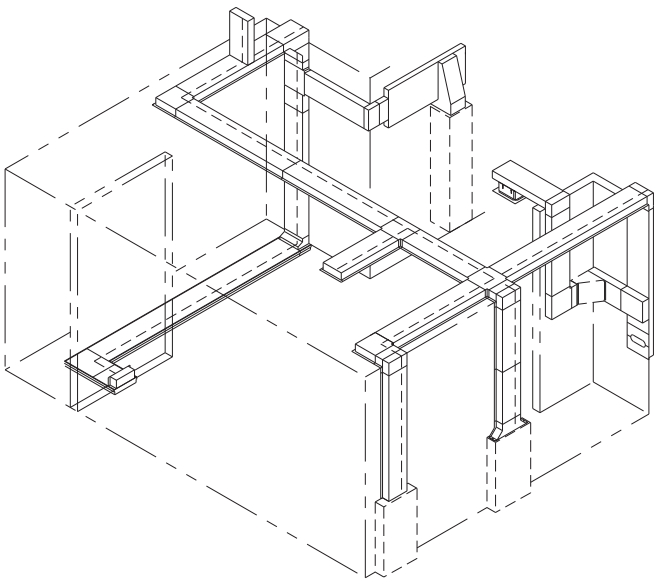
WIREMOLD

legrand®



Walker Wallduct is commonly used in the health care market. It feeds wires and cables from electrical and communication cabinets to X-ray and MRI equipment. Equipment and control rooms generally use steel Walker Wallduct. Because some health care equipment requires nonmetallic material in surrounding areas, such as scan rooms, aluminum Walker Wallduct is a common alternative.



Walker Wallduct can be installed in the wall, revealing only the cover plate. It can also be wall mounted, exposing the entire surface. Walker Wallduct may also be installed overhead to connect cables and wires between rooms. Walker Trenchduct can be used in combination with Walker Wallduct to feed equipment through the floor. The diagram above is for illustration only. It does not portray typical installation of products.

WALKER® WALLDUCT GETS YOU OUT AS QUICKLY AS POSSIBLE.

Introducing Walker Wallduct, an on-wall cable and wire management solution.

This raceway-like system is built to carry large and heavy cables, making it ideal for medical equipment in hospital scan rooms, equipment rooms, and operator rooms. It's pre-built and delivered to you fast, making sure you finish the job as quickly as possible. To complement the Walker Wallduct system, Wiremold/Legrand has also designed Walker Trenchduct.

A flush in-floor raceway, Walker Trenchduct allows you to keep cables and wires hidden in the floor while feeding them directly to the medical equipment. Wiremold/Legrand understands the needs of wiring systems because we've been installing them for over one hundred years. For intricate wiring needs in any medical facility, the family of Wiremold/Legrand products provides the smart and efficient way to complete the job and move on.

FAST

Completing on-wall wiring does not have to be time-consuming. Walker Wallduct is the easiest way to complete the job quickly. These wire and cable systems are in stock and prepared to ship upon request. Even made to order products can be built for a prompt delivery. Save yourself time by installing a Walker Wallduct wiring solution.

PERSONAL

Every project is unique. Walker Wallduct systems have all the components to satisfy your measurement and material requirements. These products are available in steel or aluminum construction to satisfy your individual needs. Easily cut with a chop saw, jigsaw, or table saw, you can custom fit the pieces for your project right in the field. Walker Wallduct offers you exactly what you need to get the job done right.

STYLE

Walker Wallduct is not only fast to order and easy to install, it also looks good. All Walker Wallduct products can be easily painted to match any wall décor or color scheme. The aluminum products have a protective peel coat finish, and Walker Wallduct allows you to choose between flush or surface mounted designs to ensure that your on-wall wiring system presents the look you desire.

ACCREDITED

Walker Wallduct cable and wire management systems are UL listed in the U.S. and Canada, and designed to meet all medical equipment manufacturer requirements.

SUPPORT

The Walker Wallduct system not only delivers powerful cable and wire organization, but it also comes with a support team ready to answer your questions at any time. Your local representative is on hand to bring you selection materials and installation specifications, helping you choose the product that is right for you. Once you select your Walker Wallduct system, expert factory support is available for any installation questions that may arise. Also, Wiremold/Legrand will provide you with a guaranteed bill of materials, ensuring you will receive exactly the parts you need to complete the job.
