HT2202-WH-V1

In-Wall TV Power Kit

Expand Your Business

Extend the electrical power from the existing wall outlet to behind the wall mounted TV without ever having to modify the home's electrical wiring – making retrofit flat panel installations complete, fast and profitable.

Support Total Power Needs

Provide power to more than just the TV. The duplex receptacle supports many plug types, including right angle plugs as well as many other power supply shapes, making it easy to power up additional devices such as set top boxes, digital TV adapters, or sound bars.

Installation Advantages

Be prepared for anything with the unique shape of the HT2202-WH-V1, which offers a large enough cutout for visual inspection of fire blocks or other obstacles inside the wall. Find and address the problem without any external wall damage, saving you both time and money.

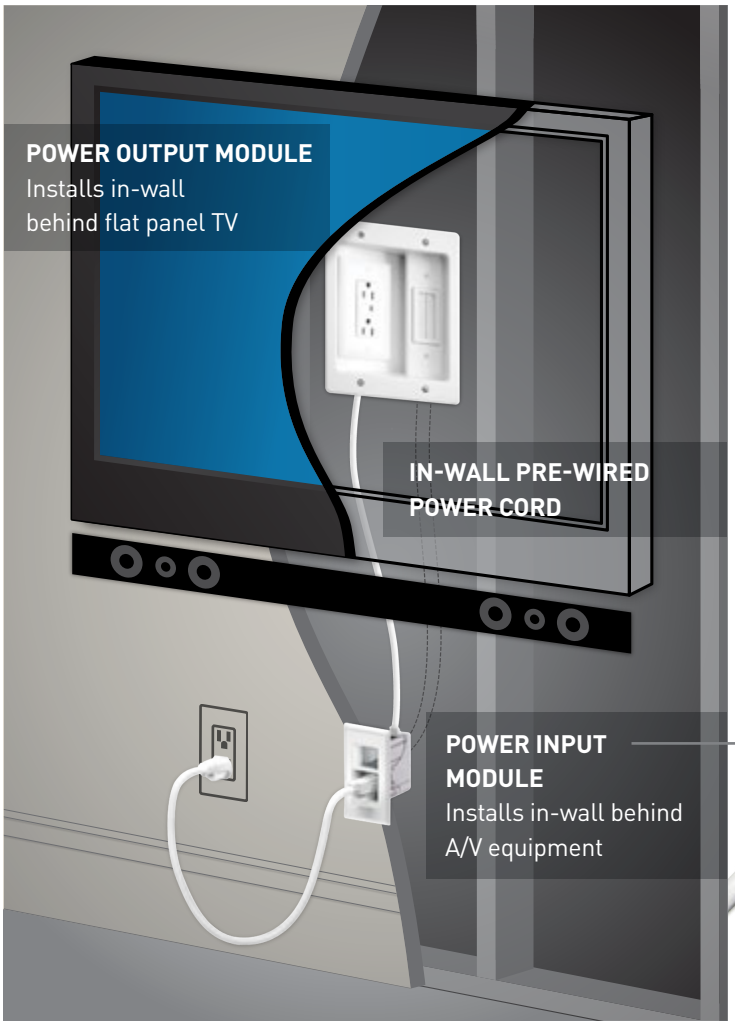
The bracket's vertical orientation is ideal for installations with non-standard stud widths such as for corner TV placement.

The power input module matches the shape and finish of other wall devices for uniformity throughout the home. It is also easy to expand and customize, providing the greatest flexibility for different entertainment center applications.

FEATURES

- Simplifies on wall flat panel installations – even in difficult to mount locations
- Hides power and AV cables for a clean, on wall installation
- Compatible with any TV brand and easily expandable
- Powers multiple devices through duplex receptacle
- ETL listed power input module and power cable assembly
- Kit Includes: Power Output Module (includes 6 ft pre-wired cord), Power Input Module, Drywall Bracket, 6ft Power Cord, and Cut-out Template with Complete Instruction Guide

KIT INCLUDES



ADDITIONAL OPTIONS

The Power Input Module can also be ganged together for greater flexibility.
