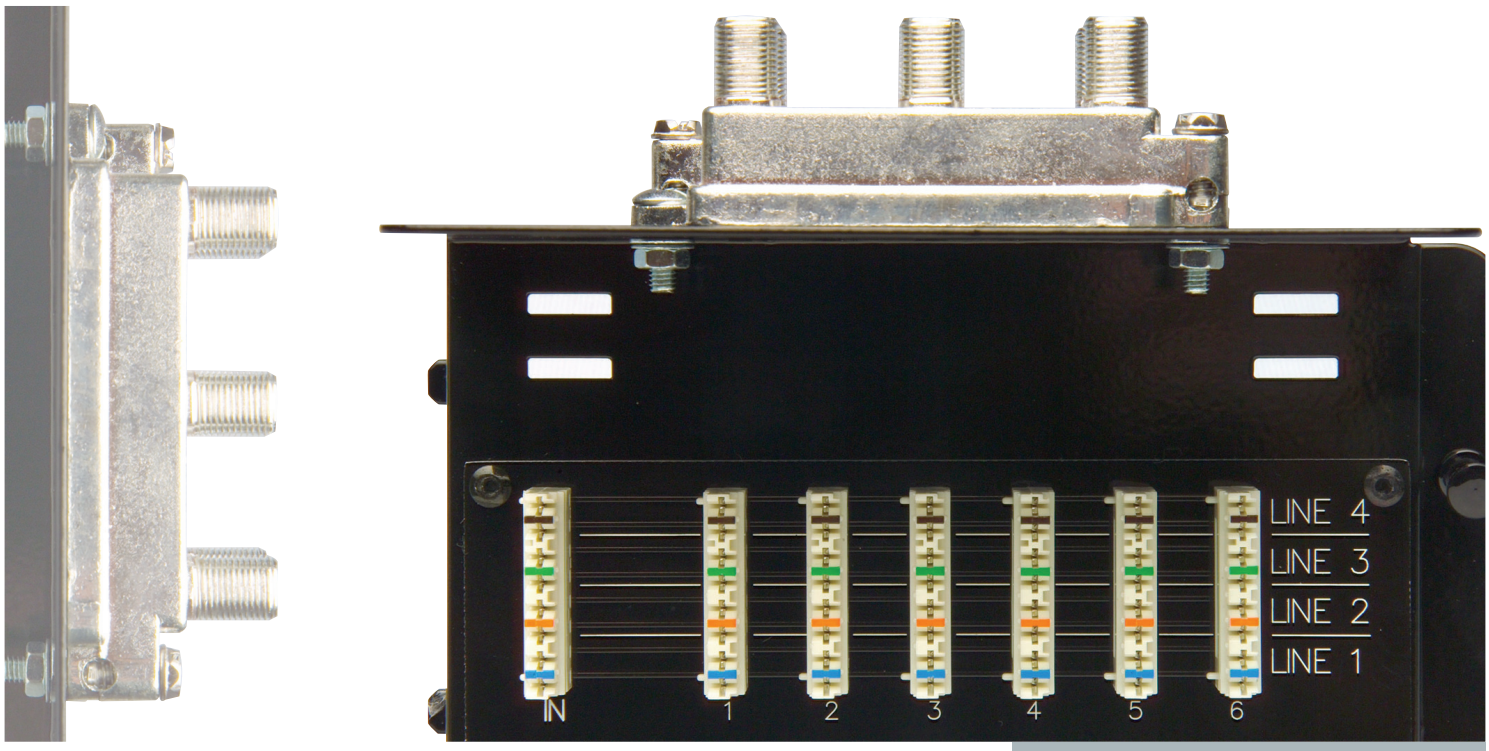
364400-04

6x4 Basic Combo Module



COMPACT VIDEO AND VOICE DISTRIBUTION

The 364400-04 is a compact video and voice distribution module designed for smaller structured wiring systems. The module distributes six lines of telephone from a front-facing 110 Punchdown module. The four port video splitter sits on a top-facing platform to minimize bending and tension on the coaxial cables. The module takes up only half the width of a standard bay style enclosure, allowing the installer to most efficiently use the space in the enclosure while maintaining organized cable management.

FEATURES

- Distributes telephone service to up to six locations
- Distributes video service to up to four locations
- Ships with compact mounting bracket
- Designed to minimize cable tension
