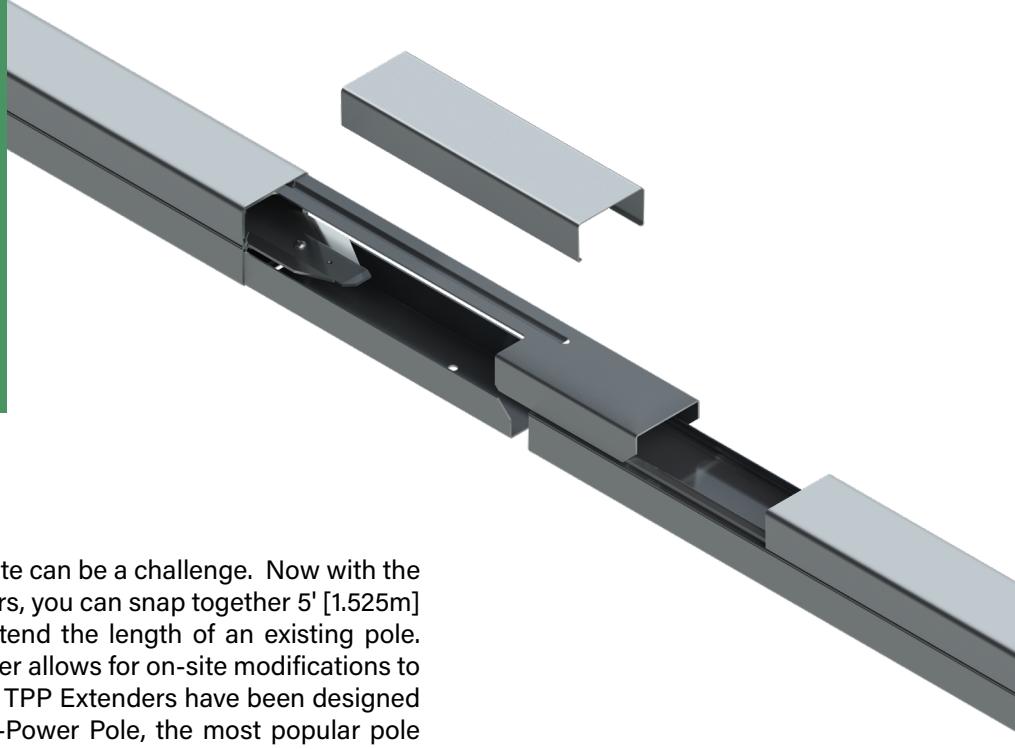
Tele-Power® Pole Extenders



Installing & relocating services are a SNAP!

Handling standard length poles on a job site can be a challenge. Now with the new Wiremold® Tele-Power® Pole Extenders, you can snap together 5' [1.525m] sections to create a complete pole or extend the length of an existing pole. The configurability of the new TPP Extender allows for on-site modifications to accommodate a variety of ceiling heights. TPP Extenders have been designed to be compatible with the 25 Series Tele-Power Pole, the most popular pole available. TPP Extenders adapt to your current or future work environments.

Features & Benefits:

- Package sized for easier handling on job site. A six-foot carton is much more maneuverable than the 10' [3.05m], 12' [3.68m], or 15' [4.57m] cartons that full-size poles require.
- Can be shipped via air freight or UPS for speed and reliable delivery. TPP Ex tenders are packaged in durable cartons and in sizes which offer more and faster delivery options.
- On-site modifications for existing poles. Extend the height of any 25DTP and 25DTC Series Pole for fast and easy installation.
- Improved availability. TPP Extenders can be stocked at local distribution for faster availability and delivery.
- Relocatable. Ready for service in 30 minutes or less for quicker reconfigurations of work space.
- Accessory packs included. Furnished with feed fittings, ceiling trim plates, T-bar mounting hardware, and carpet/floor grippers. Everything you need for a complete and stationary installation is included.

When you need a reliable power and/or data solution in an open space in the shortest amount of time. No matter the length needed, demand Wiremold Tele-Power Pole Extenders.

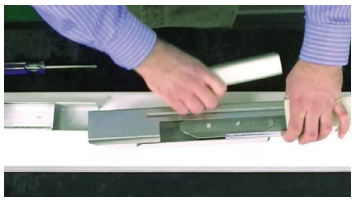
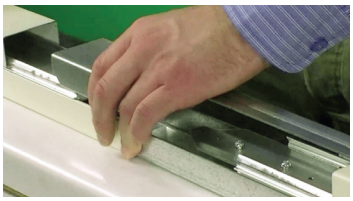
side view

Tele-Power Pole Extenders are easy to assemble and install on site. Simply:

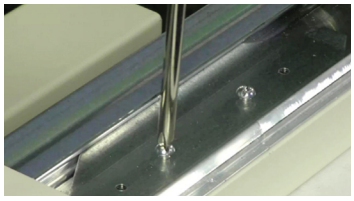
1. Remove the 8" [203mm] cover.



2. Slide the two pole sections together.



3. Tighten the two screws on the internal clip.



4. Replace the 8" [203mm] cover.
